UPDATE · OCTOBER 2026

STAR TYPING

What's new: the Documentation module, an English deck bu
open data, and geolocation for working with Orion.

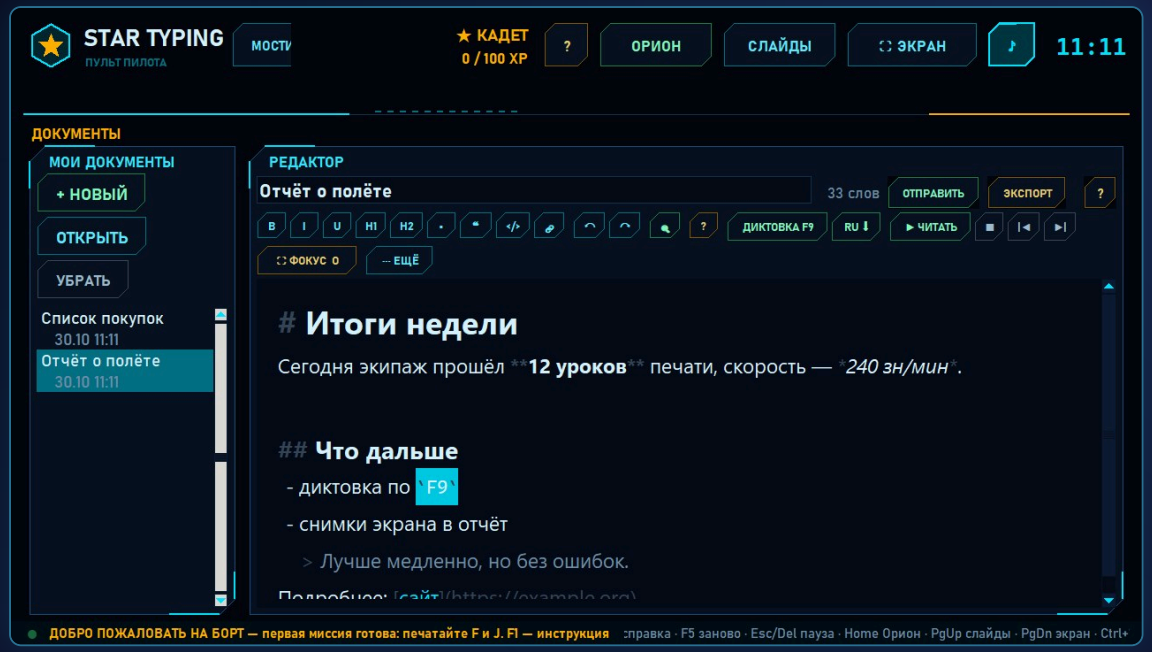

- **Documentation** — typing, dictation, translation, PDF/DOCX
- **English** — CEFR, irregular verbs, Reference, scanner
- **Orion** — right-click shows a point of the interface

Documentation

Write, dictate, translate — right on board.

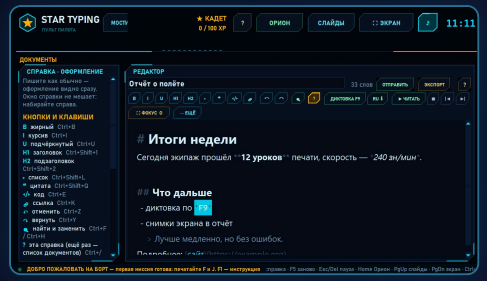

Main screen: document list, Markdown editor, command bar.

What it does

- **Typing and dictation** — keyboard or voice (F9), dictation in **RU / UK / EN**, offline
- **Markdown** as you type: **bold**, *italic*, # heading, lists, quotes, code; “?” cheat sheet
- **Images** — from the clipboard (Ctrl+V), a screen capture or a file
- **▶ READ** — read aloud with phrase highlighting and chapter jumps
- **TRANSLATE** to English or German (EN/DE), formatting kept
- **CHECK** — Orion (AI) finds typos and errors, you pick the fixes
- **PDF, DOCX, email** with .docx, export to .md/.html/.txt
- **Load on board**: .txt, .md, .docx with images — read or edit
- **Focus O** and a compact mode for 1024×600 screens

From draft to PDF — in one window

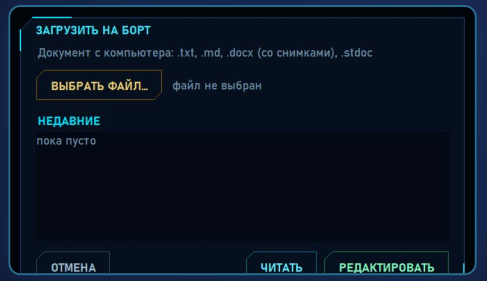

Documents save themselves. Everything for notes, reports and letters lives in one deck — no external editors.

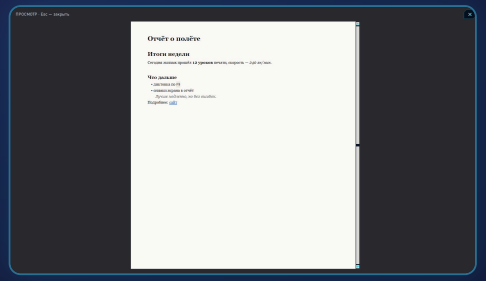

“?” — Markdown cheat sheet

Focus O — full-window editor

OPEN — load a file on board

PREVIEW — the page before printing

01
Voice

Dictation in RU/UK/EN and read-aloud with the reader's voice.

02
Translation

EN or DE: a selection or the whole document — below the text or as a new document.

03
AI check

Orion suggests fixes as a list — apply only the ones you want.

04
Export

PDF, DOCX, Markdown, HTML, TXT and email with a .docx attachment.

English: real data

CEFR levels, verbs, Reference.

01
Open sources

CEFR-J Wordlist (TUFS), Octanove C1/C2, Tatoeba (examples), Wiktionary (translations, IPA), FrequencyWords — licences credited.

02
CEFR sets

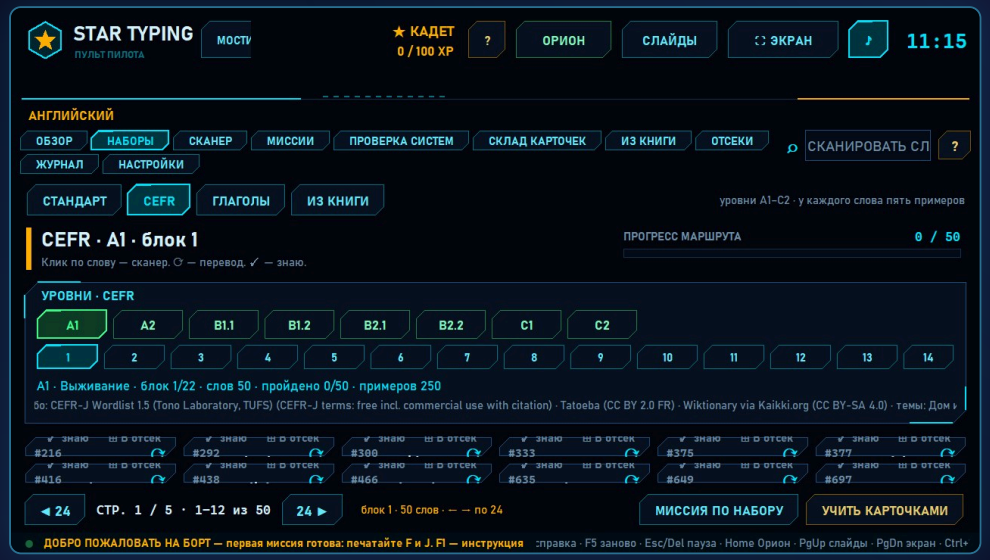

A1 → C2: A1, A2, B1.1, B1.2, B2.1, B2.2, C1, C2 — blocks of 50 words, up to five examples per word.

03
Irregular verbs

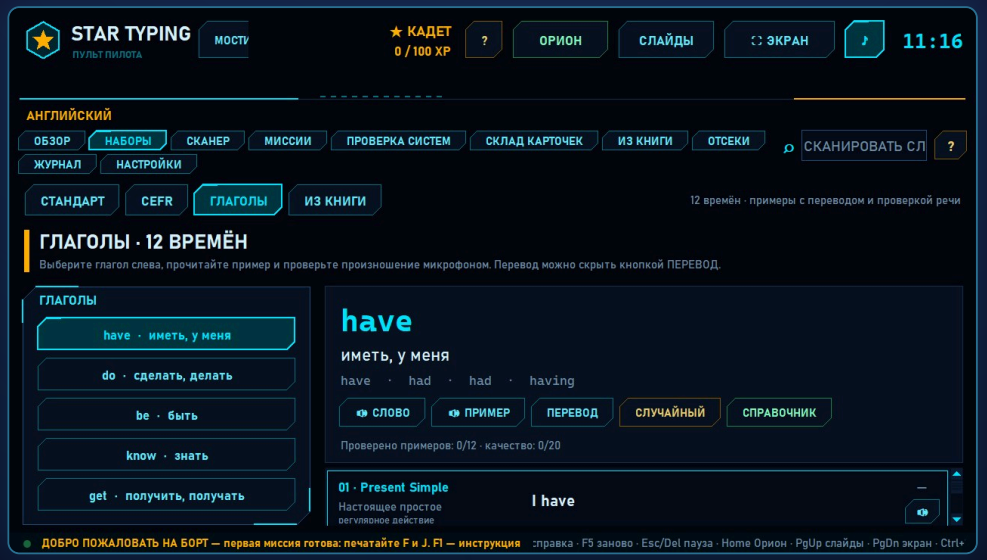

V1/V2/V3 forms and conjugation across 12 tenses: affirmative, negative, question — an example for every person.

04
“Reference”

Find a verb as you type, ←/→ tense, ↑/↓ aspect, pronunciation check for every form.

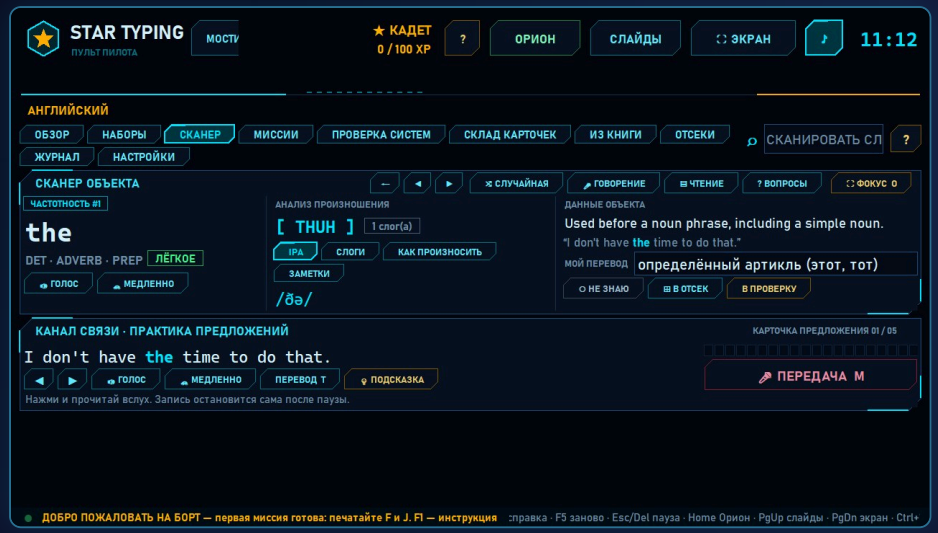

CEFR sets — levels, blocks, route progress.

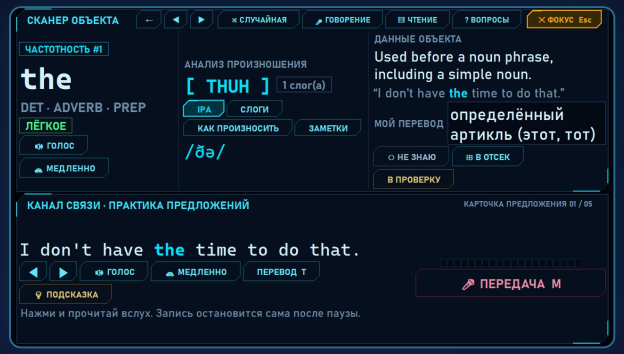

Verbs · 12 tenses — forms, examples, translation.

Word scanner and focus O

Compact — even at 1024×600.

Scanner: three groups — word & forms, pronunciation analysis, object data.

Focus O — the word card fills the window.

Compact scanner

- **Three groups** instead of scattered panels
- Fits 1024×600 without scrolling
- **Focus O** — just the word, the example and the mic

Unified pronunciation check

- One component in every deck: scanner, practice, verbs, Reference, warehouse, book
- **80 %** threshold — passed
- **Auto-advance** to the next form
- **Unlimited retries**

HOTKEYS

M microphone **T** hold — hint/translation **O** focus

Captain, level unlocking and the book

Beginners don't drown in C2, advanced learners don't wait — and the ship's captain sees everything at once.

01

Captain — all levels

The ship's captain gets every level and every verb unlocked from the start.

02

Progressive unlock

The next level opens once 80 % of the previous level's words are done.

03

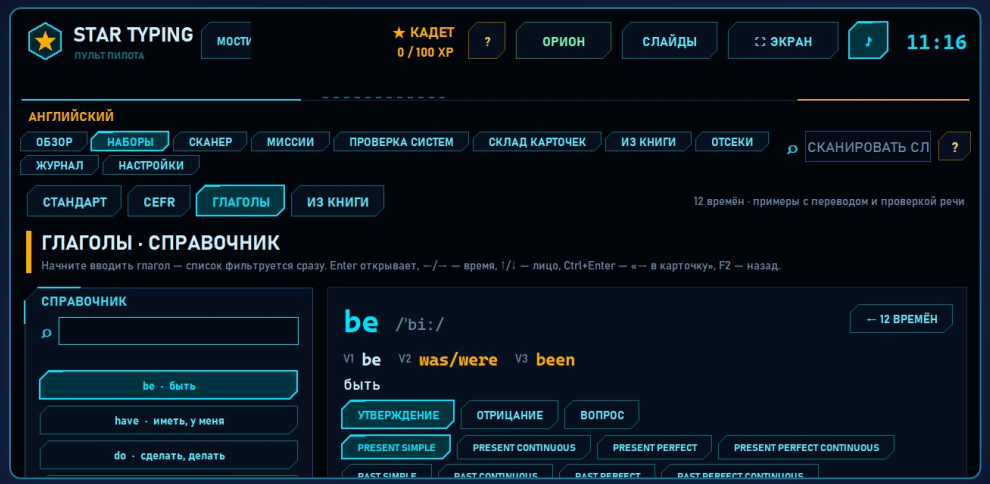

Book sentence cards

For advanced users (speed + B1): sentences from the book you read — Russian → say it in English.

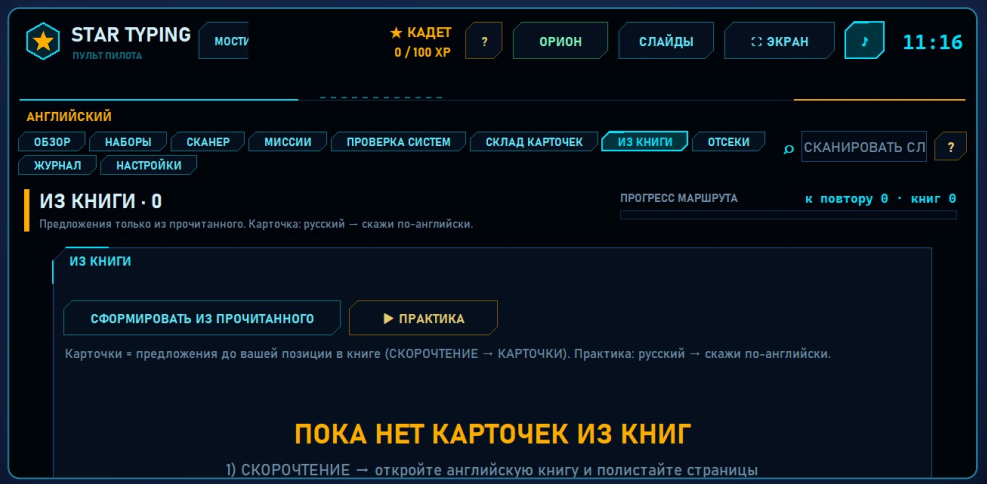

04

Faster book

O(n) text parsing, a persistent cache, background sync — books are ready sooner.

"Reference" with the unified pronunciation check.

"From the book" — sentence cards for advanced users.

Geolocation: right-click → a point for the chat

To reshape the interface together with the onboard AI, you don't have to describe "that button on the right". Point at the spot — Orion understands.

How it works

- **Right-click** anywhere in the window
- The bottom line shows **deck, sub-tab, element and coordinates**
- The line is **copied to the clipboard** at once (text fields keep their usual menu)
- **Ctrl+V** into Orion's chat together with your request

Bottom line after a right-click:

```
⊕ DOCUMENTATION · button TRANSLATE · 612, 148 · copied
```

Message to Orion:

```
DOCUMENTATION · button TRANSLATE · 612, 148 — move this button
left and make it bigger
```

WHY

- An exact spot instead of long descriptions
- Fewer follow-up questions — faster changes
- Quality collaboration with the onboard AI on the interface

4

Contributor mode

The fourth way to work with Orion: contributors evolve the ship itself together with the onboard AI. The feature is being added on the fix/stability branch.
