A PLATFORM FOR PROGRAMMERS AND LANGUAGE LEARNERS

STAR TYPING

with a built-in AI agent “Orion”

For people who work in IT and want to grow, and for everyone learning a language: type your own texts and books with the translation alongside, English all the way to the IT interview, speed reading and a reader, music while you train — in one app.

★ AI agent “Orion” · Touch typing · English · Speed reading and reader · Documentation · Music and radio · Breaks and mini-games

10 lessons EN-01…EN-10

20 000 words + A1–C2 sets

4 interface languages

40–75 ms to open a section

VALUE

An AI agent and the skills IT needs every day

A platform for programmers and language learners. Star Typing brings together what is usually scattered across services: the AI agent “Orion”, a touch-typing trainer, English with frequency vocabulary and a developer set, speed reading and a book reader, and a “Documentation” module with voice input. Everything is keyboard-driven.

01

AI agent “Orion”

The platform evolves from within: the author already works on the project together with the AI agent on board. Chat, images, history search, task panel.

02

Touch typing

Type your own texts, PDFs and whole books with the translation alongside — train typing and learn the language at once. The base: lessons EN-01…EN-10.

03

English

CEFR A1–C2 sets and 20,000 frequency words, irregular verbs in 12 tenses, 579 IT-interview cards, voice pronunciation check.

04

Speed reading and reader

Speed-reading mode and scanner. A reader for your books: page view, instant word translation.

Who it is for

- People who work in IT and want to grow: developers, engineers, everyone who types a lot
- People preparing for an interview in English: 579 cards of the “IT Interview” set
- People who read books in the original

Why it works every day

- Keyboard first: hotkeys for every section
- Sections open in 40–75 ms, the header is the same everywhere
- “Documentation”: notes and reports by voice, read-aloud, translation, PDF/DOCX

All in one: train to internet radio, switch to mini-games and come back to the lesson. Communication between users — chat and touch-typing tournaments — is **planned**.

WHO IT IS FOR

A platform for programmers and language learners

First — for people who work in IT and want to grow. Then — for everyone who learns or teaches a language: English now, German coming next.

01
IT professionals

Core audience

- Touch typing as a work skill — on your own texts and books
- 579 “IT Interview” cards for the interview in English
- AI agent “Orion” at hand, “Documentation” for notes and reports
- Keyboard control, a sci-fi cockpit atmosphere

02
Language learners

English — now, German — planned

- CEFR A1–C2 sets and 20,000 words by frequency
- Voice pronunciation check
- Books in the original: translation while typing and reading
- Reverse cards: from the translation to the English word

03
Students

Practice and reverse translation

- Word and sentence cards from what you read
- Russian → English — available now
- **Planned:** Russian → German and other pairs, grammar rules

04
Teachers

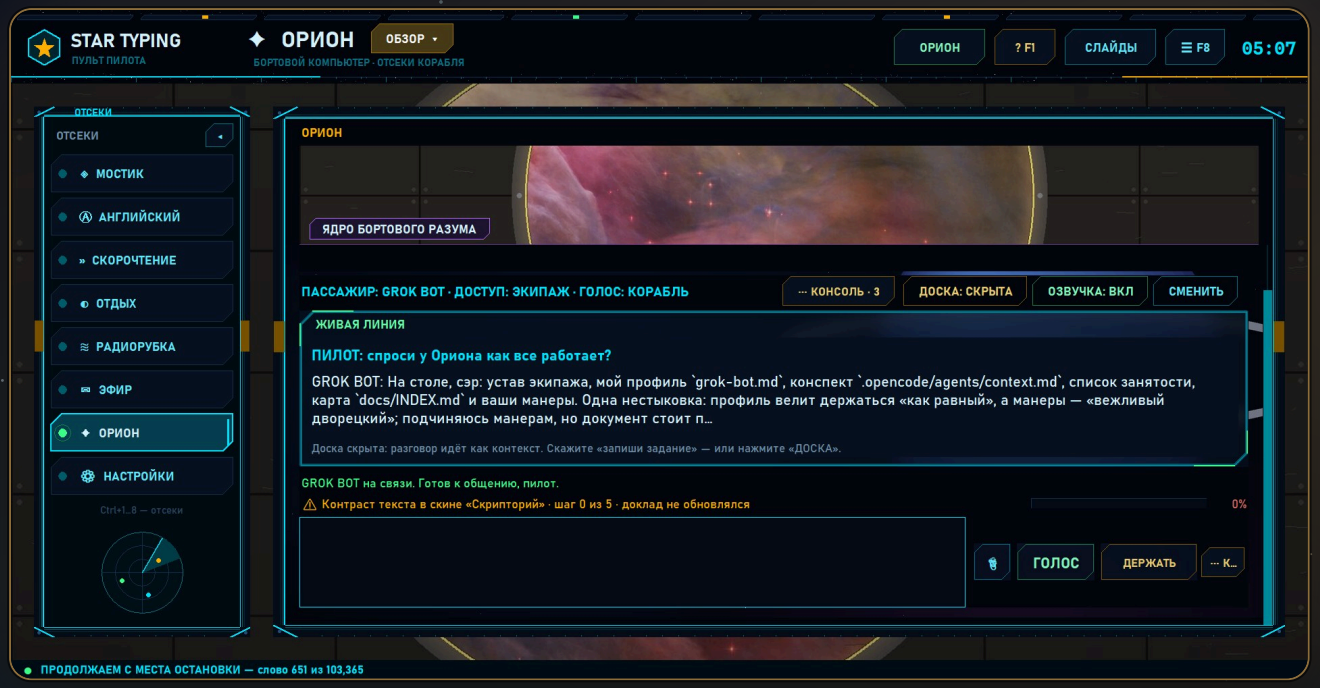

Assignments and platform growth

- Already now: any text of yours can be loaded for typing with translation
- **Planned:** homework and easy assignment to students
- **Planned:** suggest improvements via “Orion”

KEY FEATURE

AI agent “Orion”

Not just an assistant but a participant. The author already develops Star Typing together with the AI agent on board — the platform changes from within. For everyone: conversation, images, history search and a clear view of task progress.

Real work: the author discusses project tasks with the AI agent on board — a working prototype, not a mock-up.

◆ Chat

Answer text can be selected and copied.

◆ Images

Image attachments and full-size view.

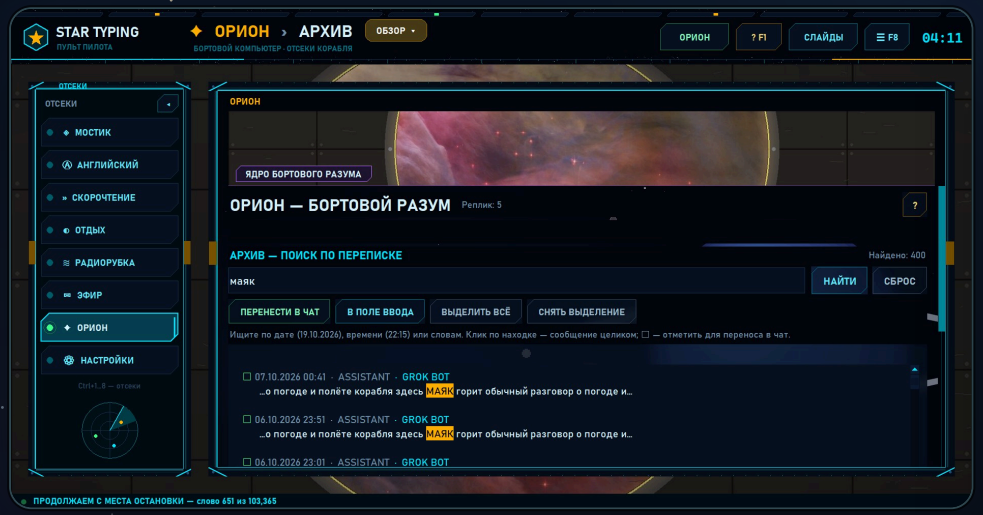

◆ History

Search the conversation with highlighted matches and context.

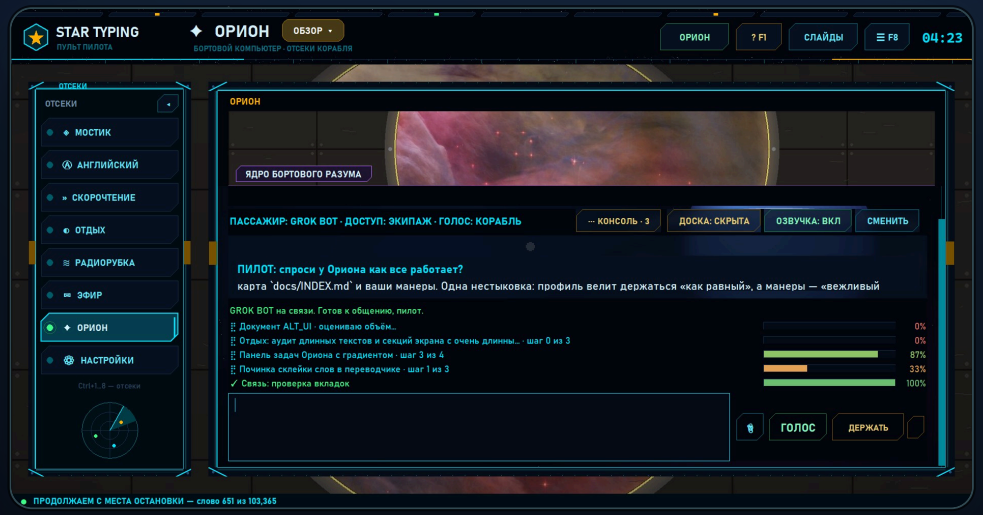

◆ Task progress

Several tasks at once: percent of plan and a gradient red → green.

Chat, images, history and tasks

History search: the found word is highlighted, with date and context.

Task panel: a row per task, percent of plan, colour from red to green.

Copyable chat

- Select text with the mouse
- Ctrl+C and context menu

Images

- 📎 button or paste with Ctrl+V
- Full-size view
- Zoom, Esc — close

History

- Search with highlighted matches
- Full message in context
- Jump ◀▶ between matches

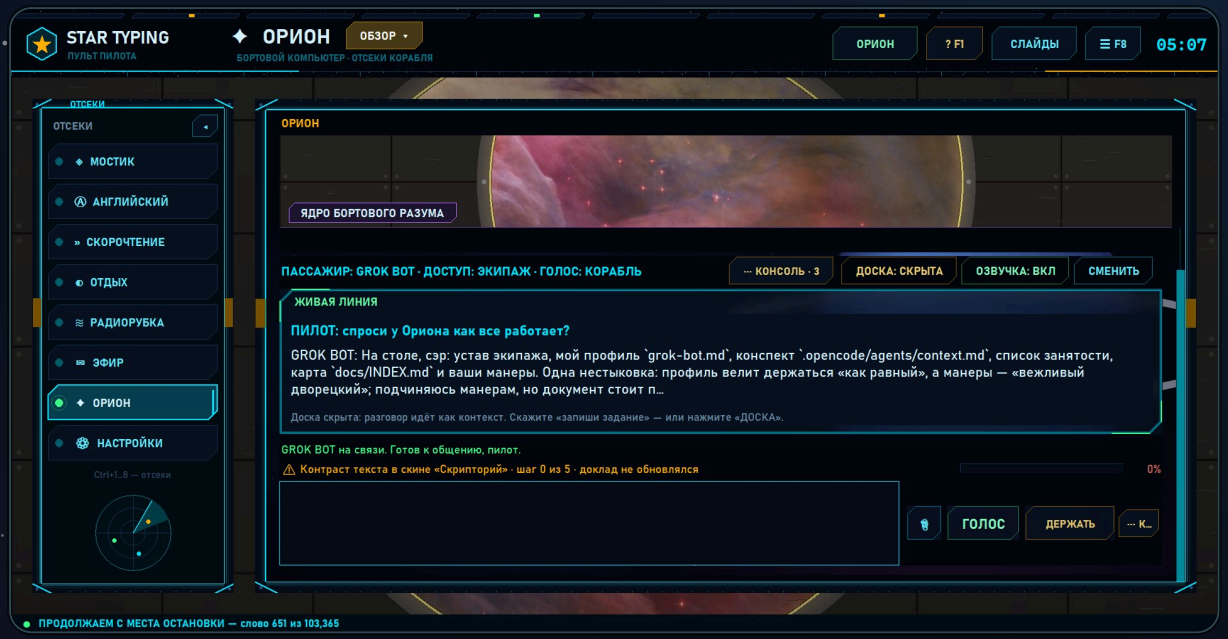

Task progress

- A row per task
- The agent builds the plan itself; percent = plan completion
- The colour shifts red → green

SECTION 01

AI agent “Orion”

A platform that evolves from within.

The author and the AI agent work together on the project — right in the app (“Starship” skin).

The same chat in the “Steampunk” skin: a real conversation about developing the project.

What it is

A built-in AI agent through which the platform changes from within: in the working prototype the author develops Star Typing by talking to a paid AI agent right on board. Chat features: copyable text (selection, Ctrl+C, context menu), images via 📎 or Ctrl+V with full-size view, history search and a progress panel where the agent builds the plan for each task itself.

Why it helps

- The platform evolves from within — through the AI agent on board
- Answers can be copied and used right away
- Images are attached straight into the chat
- You can see which step each task is at

OUTLOOK · PLANNED

- AI agent showcase: connecting to OpenAI, Grok and other services
- Developer-participant mode — open to external contributors (in the web version)
- Analysis of typing mistakes and exercise selection
- Explanations of words and phrases from the books you read

AI AGENT “ORION” · MODES

Four ways to work with “Orion”

The on-board guide is free and on by default. Developer-participant mode already works as a prototype: through it the author develops the platform from within. The rest is being built for the web version.

Free · default

1
On-board guide

A built-in helper that works without AI.

- Nothing to connect
- Shows where things are and where to start

In the web version · planned

2
Your own AI agent

Connect your own key or server (endpoint) and choose a model.

- You choose which AI to use
- Works with your own access
- The basis of the future AI agent showcase

In the web version · planned

3
Service AI agent

For those who support the project with donations.

- No key of your own needed
- Support helps the project grow

Working prototype

4
Developer-participant mode

The author already develops Star Typing with a paid AI agent on board: tasks, plan and changes — right from the app.

- The platform changes from within through AI agents
- **In the web version · planned:** open the mode to external contributors
- Every change is a proposal reviewed by the authors

PLANNED

AI agent showcase

- A window for connecting services — OpenAI, Grok and others
- Your own AI version on board — for those who need their own agent
- A marketplace offering AI agents from these services

AI AGENT "ORION" · GEOLOCATION

Right click → a point of the interface into Orion's chat

To rework the interface together with the on-board AI, you don't have to describe "that button on the right". Point at the place — Orion will understand.

How it works

- **Right-click** anywhere in the window
- The bottom line shows **the bay, sub-tab, element and coordinates** of the point
- The line is **copied to the clipboard at once** and marked "copied"; input fields keep their usual menu
- **Ctrl+V** into Orion's chat — together with what needs to change

Bottom line after a right click (example):

```
⊕ DOCUMENTATION · button TRANSLATE · 612, 148 · copied
```

Message to Orion's chat (example):

```
DOCUMENTATION · button TRANSLATE · 612, 148 — move this button
to the left and make it larger
```

WHY

Precise, not in words

- An exact place instead of "that button on the right"
- Fewer follow-up questions — faster edits
- High-quality collaboration with the on-board AI on the interface

4

Developer-participant mode

Geolocation is made for Orion's fourth mode: contributors change the ship's interface together with the on-board AI. The feature is being added in the fix/stability branch.

INTERFACE EVOLUTION

Before and after: classic and new interface

Classic layout (“Starship” skin): sections as tabs in the top bar, subsections in a second row with Ctrl+F1…F5 hotkeys; a virtual keyboard, speed and accuracy gauges.

New alternative “CONSOLE-CABIN” interface: a column of sections on the left, a single header with the title and the “OVERVIEW ▾” menu, breadcrumbs.

Single header

Every section looks the same: title + “OVERVIEW ▾” menu. No need to hunt for the menu.

Breadcrumbs like in an OS

A “Section › Subsection” path always shows where you are — like in a file manager.

Your choice

Every skin comes in a classic and an alternative variant — chosen at sign-in.

NAVIGATION AND KEYBOARD

Wherever you are — the header is the same

Section name, the “OVERVIEW ▾” menu with all subsections, and breadcrumbs. Any subsection is one action away; sections open in 40–75 ms.

“OVERVIEW ▾” menu in the “English” section: all subsections in one list.

“Section › Subsection” breadcrumbs: the path in the header shows where you are and how to go back.

40–75 milliseconds to open a section. The interface responds instantly.

F1 Keyboard first: F1 — help, F8 — menu, F11 — full screen. More on the next page.

Keyboard-driven — no wasted motion

Hotkeys

M, T, O and Esc work the same in every bay.

F1	help for the current section
F8	application menu
F11	full screen
Ctrl+F1…F5	touch-typing subsections
Alt+1…4	settings subsections
Ctrl+C	copy text in Orion's chat
Ctrl+V	paste an image into Orion's chat
M	microphone: pronunciation check, dictation
T	hold — hint or translation
O	focus mode: only the essentials, full window
Esc	leave focus, close a window or viewer

F1 help: a short description of the section and its keys.

4 languages

Русский, українська, English, Deutsch.

Monitors

All windows open on the monitor where the app is.

Screen

Full-screen mode and a wallpaper slideshow for each skin.

STAR TYPING IN NUMBERS

Already built — and it works

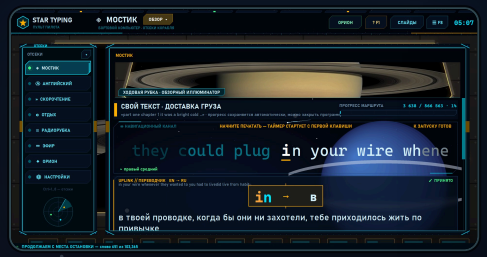

Below is only what the desktop version has today.

20 000 words in frequency sets S-1000…S-20000	**A1–C2** CEFR sets: 8 steps, blocks of 50 words	**12** tenses in the irregular-verb cards	**579** “IT Interview” cards for interviews	**4** interface languages: Russian, Ukrainian, English, German
8 sections in one app, including “Documentation”	**7 × 2** skins, each with a classic and an alternative look	**80 %** pass threshold in the unified pronunciation check	**3** dictation languages: Russian, Ukrainian, English	**4** Orion modes: the guide and the development prototype already work

For German books there is already a QWERTZ layout hint and an option to replace ä ö ü ß with ae oe ue ss — if your keyboard has no German layout. The Russian layout has its own lesson set.

APP MAP

All sections — in one window

Touch typing

Lessons, your own texts and books

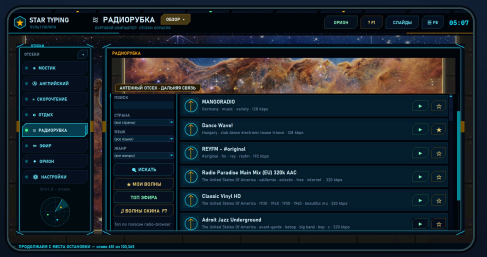

English

20,000 words, cards, exercises

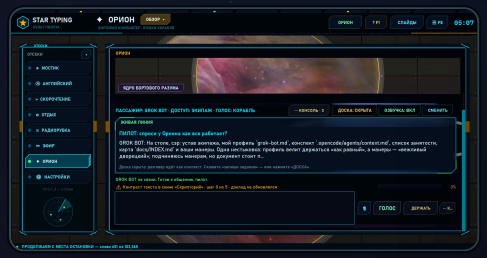

Speed reading and reader

Reading speed, your own books with translation

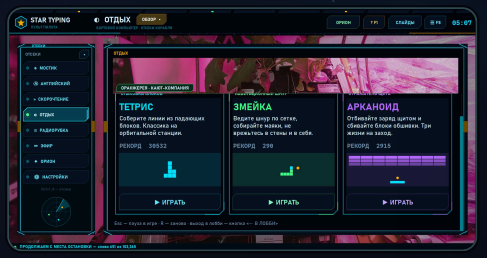

Music and radio

Internet radio and favourite stations

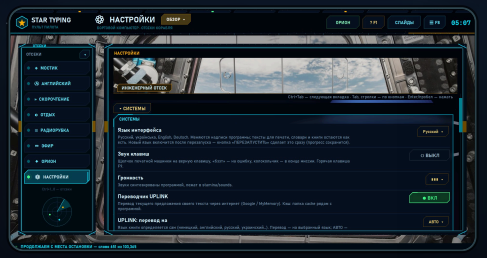

AI agent “Orion”

Chat, images, history, tasks

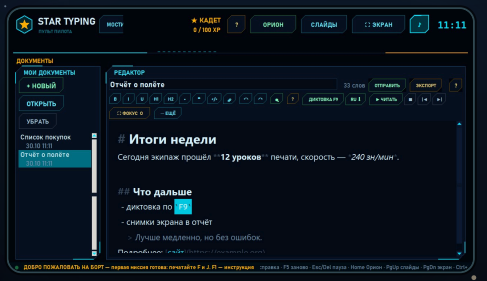

Breaks and mini-games

Short games between sessions

Settings

Language, sound, translation, skins

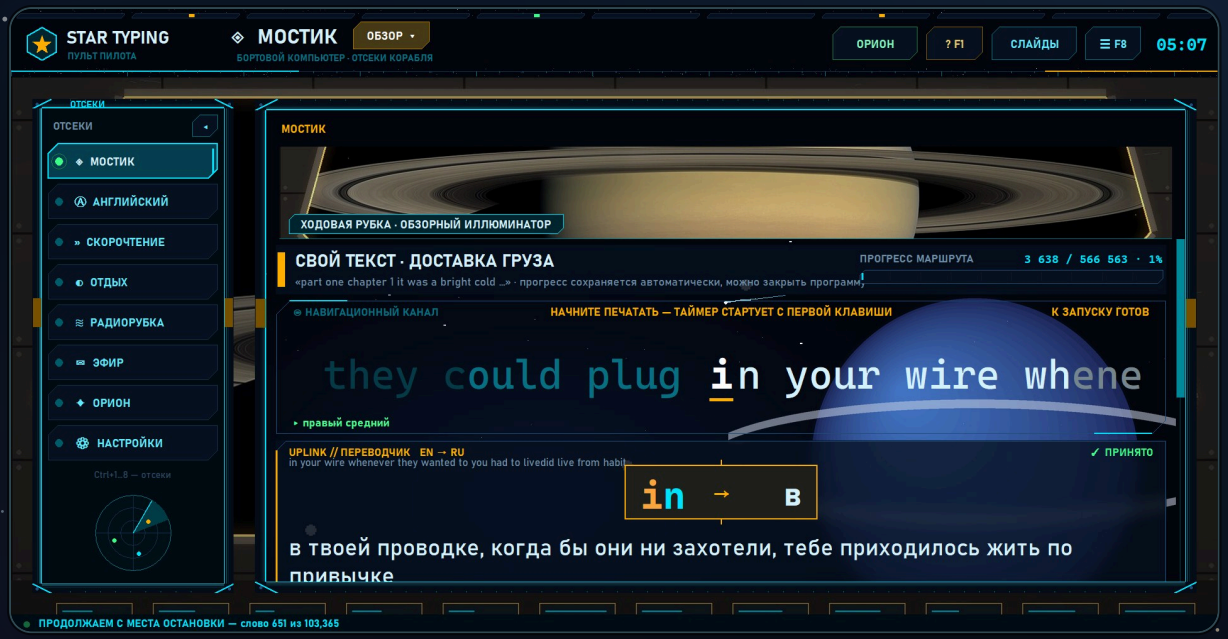

Documentation

Typing, dictation, translation, PDF/DOCX

SECTION 02

Touch typing

Type and learn English on your own texts.

Typing a book with translation: below the line — the translation of the current sentence; large — the current word and its translation.

Your own text: a book, file, PDF or clipboard text; on the right — text processing before typing.

What it is

The main thing is to type what interests you: your own texts, articles from PDFs and whole books in a foreign language, seeing the translation as you type. That way you train touch typing and learn the language at the same time. The starting base is ten lessons EN-01…EN-10: from the home row to digits, each with its own speed goal (WPM).

Why it helps

- Typing and English — in one session
- Your own material instead of dull rows of letters
- Sentence and word translation — right under the line
- Your place in the book is remembered
- Lessons that introduce letters gradually — to start from zero

OUTLOOK · PLANNED

- English word and phrase cards for typing practice
- Touch-typing tournaments and contests — together with future communication
- New lesson sets

Type — and learn the language

The chain from your file to an English book with the translation alongside. Everything below already exists in the desktop version, except items marked “planned”.

1
Your own text

- “Open file” (.txt), “Paste from clipboard” or the “Free books” catalogue
- Processing before typing: remove capitals, punctuation, extra spaces
- The text is saved in your library

→

2
PDF → text

- “Open PDF” button: page selection and preview
- Cleanup: page numbers, headers and footers, hyphenation, joining lines into paragraphs
- The result is an ordinary book: typing, speed reading, translation
- A scan without a text layer must first be recognised by another program

→

3
Book with translation

- Type a whole book; your stopping point is remembered
- Below the line — the translation of the current sentence
- Large — the word you are typing, with its translation alongside
- The book language is detected automatically; translation goes to the language you choose

→

4
Cards

- “English” → “From book”: sentences from what you read
- Russian on the card, the answer in English
- **Planned:** cards for typing practice

How translation works

Translation goes via the internet (Google / MyMemory). Offline, already translated phrases are available from the cache. English text is translated into the interface language or the one chosen in settings; Russian and Ukrainian — into English.

The base remains

Ten lessons EN-01…EN-10 introduce keys gradually: finger hints, a WPM goal, stars for accuracy and speed, adaptive training of weak keys.

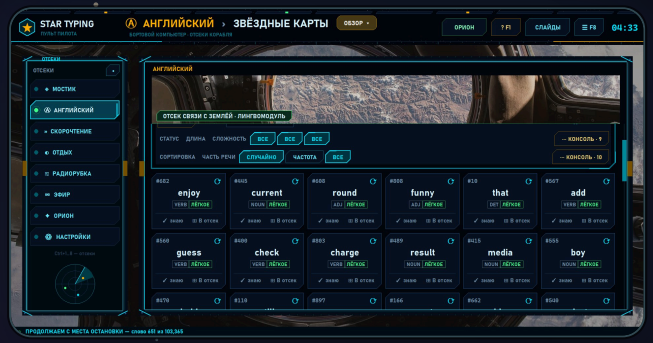

SECTION 03

English

Vocabulary for working in IT.

Section overview: daily goal, reviews, day streak, level and word sets — from S-1000 to “IT Interview”.

Word cards of the S-1000 set: filters by status, length, difficulty and part of speech.

What it is

Sets **CEFR A1–C2** from open sources and a base of **20,000 words** in the frequency sets S-1000 (top 1000), S-3000, S-10000 and S-20000. Each card has IPA transcription, translation, examples, difficulty and part of speech. Separately — **579 cards** for IT interviews. Plus answer evaluation, quick exercises (random words, speaking, reading, questions) and cards from books.

Why it helps

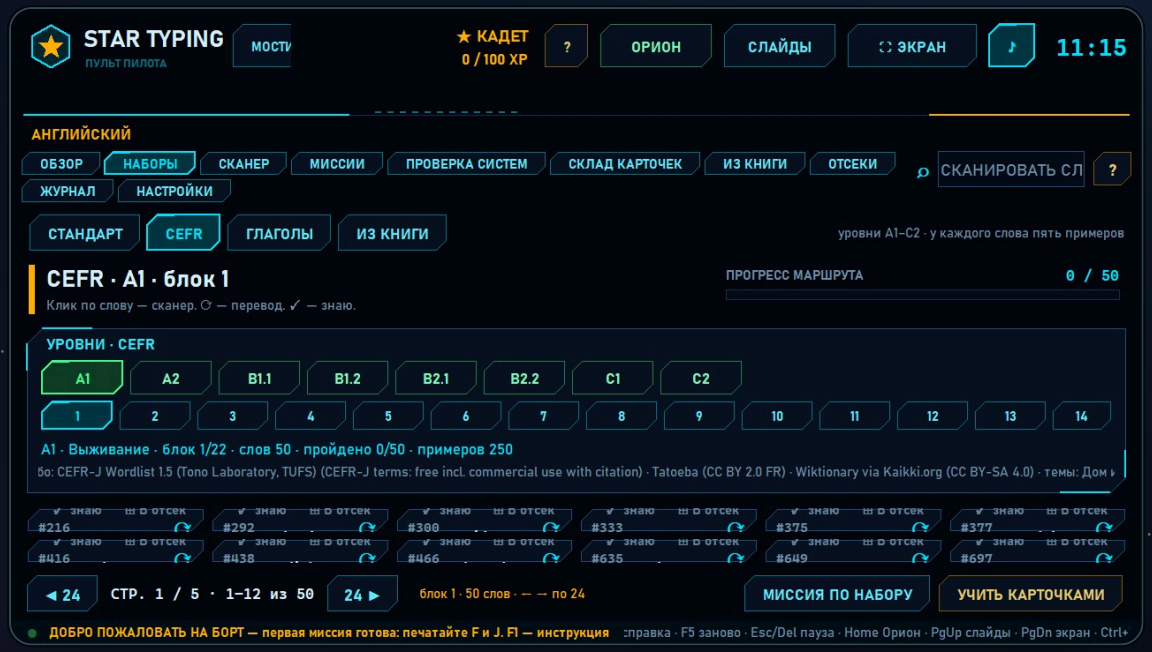

- From A1 to C2 — by CEFR level and frequency sets
- 579 “IT Interview” cards — vocabulary for interviews
- Sentences from books you read become cards

OUTLOOK · PLANNED

- English grammar rules — in addition to word cards
- Other languages on the platform: German next, on the same principle
- Typing new words as a touch-typing exercise

A1–C2 sets built on open data

CEFR levels from A1 to C2 are assembled from open dictionaries — with authors and licences credited.

CEFR sets: levels, blocks of 50 words, route progress.

A1 · A2 · B1.1 · B1.2 · B2.1 · B2.2 · C1 · C2

Blocks of 50 words, up to five examples per word, IPA and translation.

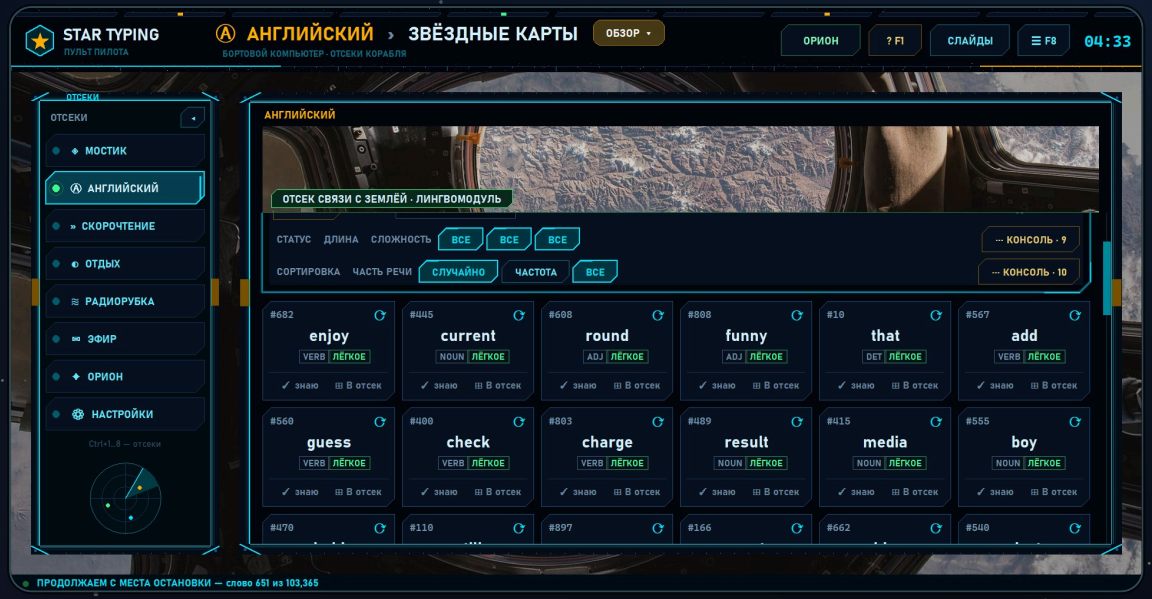

Where the data comes from

Source	What it provides	Licence
CEFR-J Wordlist 1.5	levels A1–B2 (TUFS, Tono Lab)	free, with citation
Octanove C1/C2	levels C1–C2	CC BY-SA 4.0
Tatoeba	example sentences	CC BY 2.0 FR
Wiktionary	translations, IPA, parts of speech	CC BY-SA 4.0
FrequencyWords	word frequencies for choosing translations	CC BY-SA 4.0

The full list of sources and licences is in the project README.

ENGLISH · WORD CARDS

What is inside every card

Card grid with filters and sorting.

S-1000	S-3000	S-10000	S-20000	579
top 1000	frequent	extended	up to 20,000	IT Interview

Word card

- IPA transcription and syllable-by-syllable pronunciation
- Translation into Russian
- Example sentences with translation
- Difficulty and part of speech
- Typical mistakes

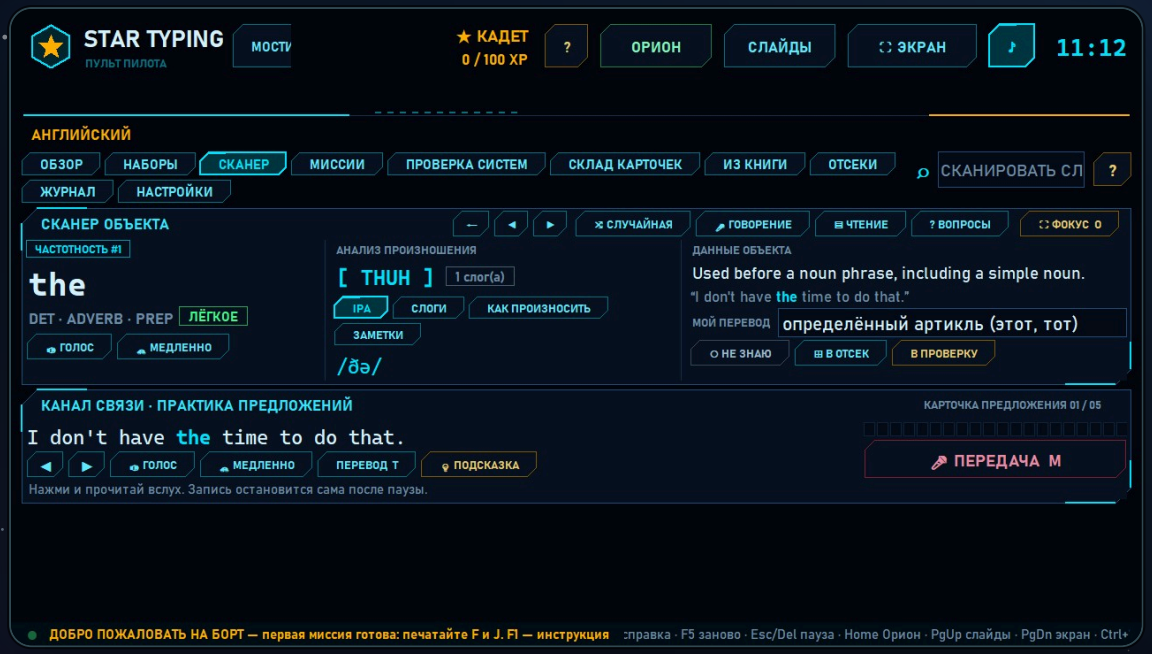

Filters and sorting

- Filters: status, length, difficulty, part of speech
- Sorting: random or by frequency

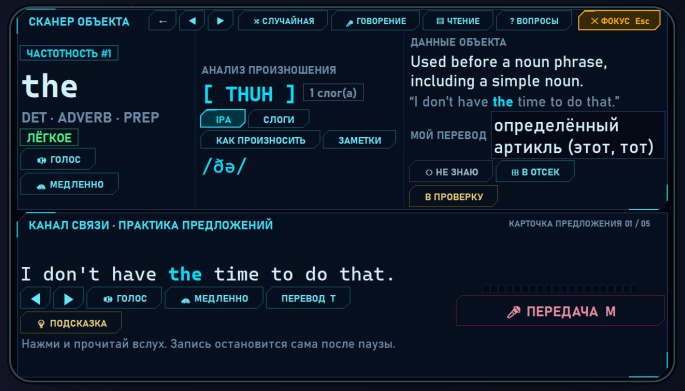

20 000 + 579

Frequency sets S-1000…S-20000 and 579 cards for IT interviews.

Compact scanner and focus O

Scanner: three groups — word and forms, pronunciation analysis, object data.

Focus O: the word card fills the window.

Compact scanner

- **Three groups** instead of scattered panels
- Fits 1024×600 without scrolling
- IPA, syllables, example and translation side by side

Focus O

- Only the word, the example and the microphone
- Esc — back to the normal view

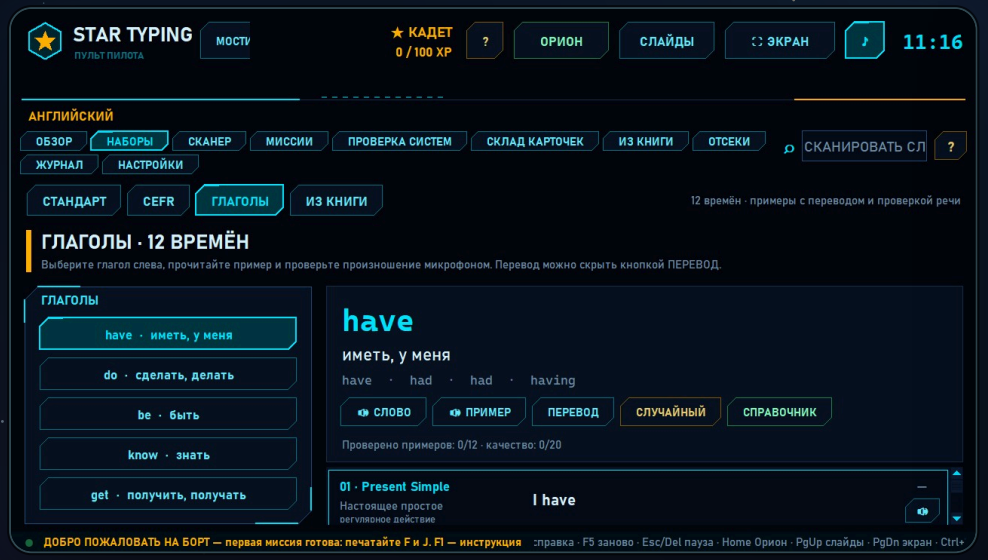

Shared keys

M microphone

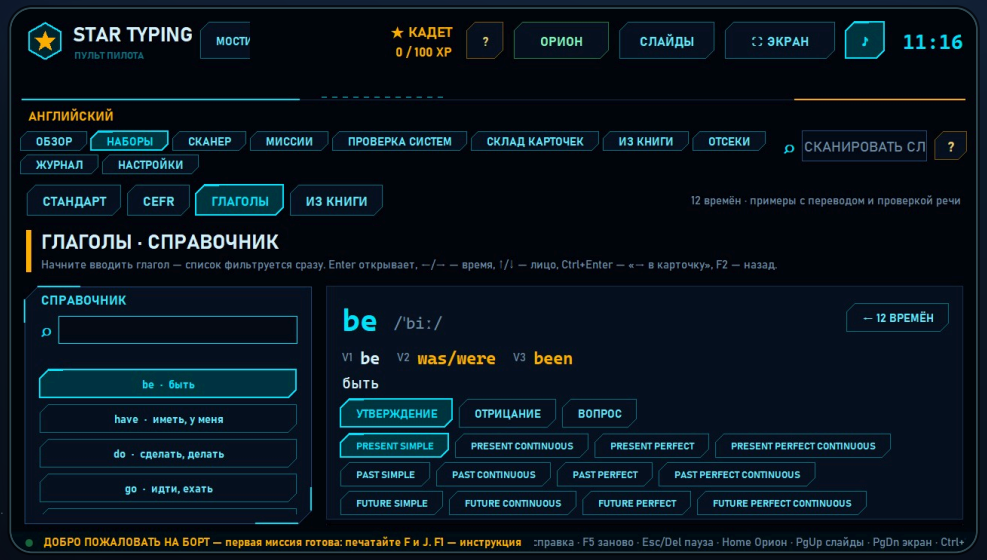

T hold — hint / translation

O focus **Esc** exit

12 tenses and the “Reference”

Verbs · 12 tenses: V1/V2/V3 forms, examples and translation.

“Reference”: verb search and a tense table with pronunciation check.

01
Forms and tenses

V1/V2/V3 and conjugation in 12 tenses: affirmative, negative, question — with an example for every person.

02
“Reference”

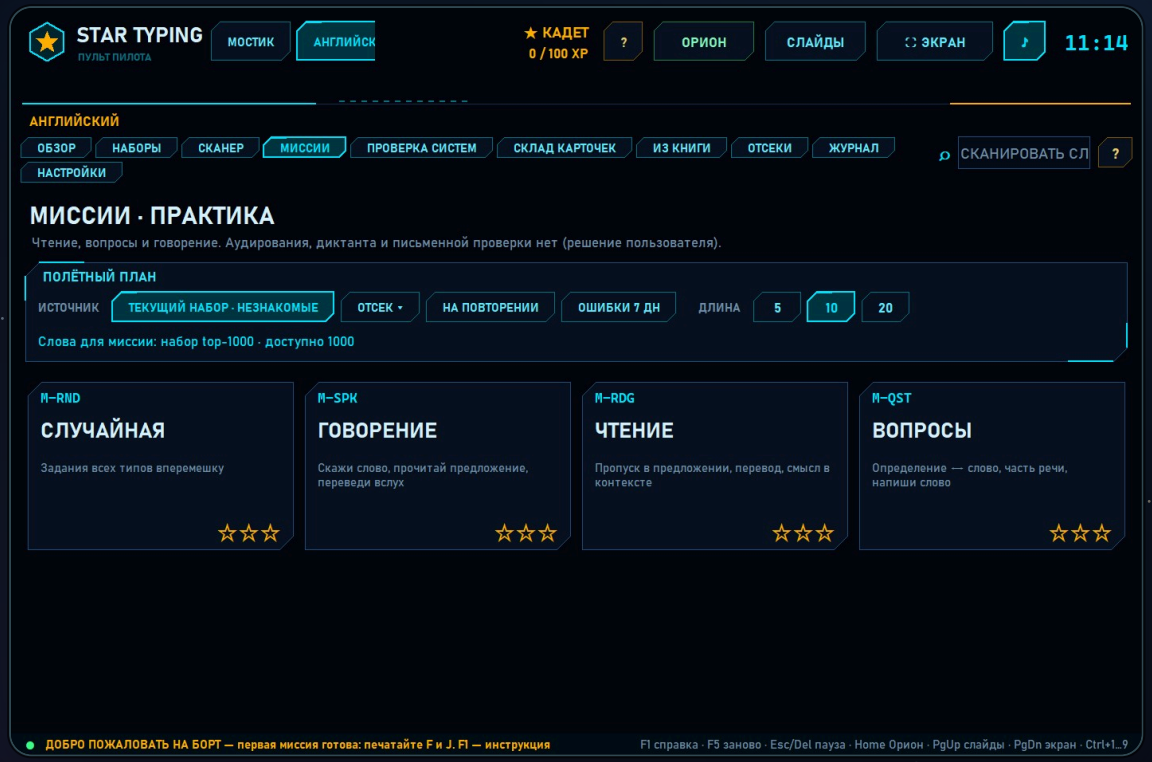

Search a verb as you type: ←/→ — tense, ↑/↓ — aspect, translation alongside.

03
Check every form

Every form can be spoken into the microphone — the same unified check applies.

Unified pronunciation check

The same check in every English bay: microphone on M, a clear result, unlimited attempts.

Missions · practice: speaking, reading and questions — the same check as in the scanner and verbs.

One component — everywhere

- Scanner, practice, verbs, “Reference”, card store, book
- The same hints and keys in every bay

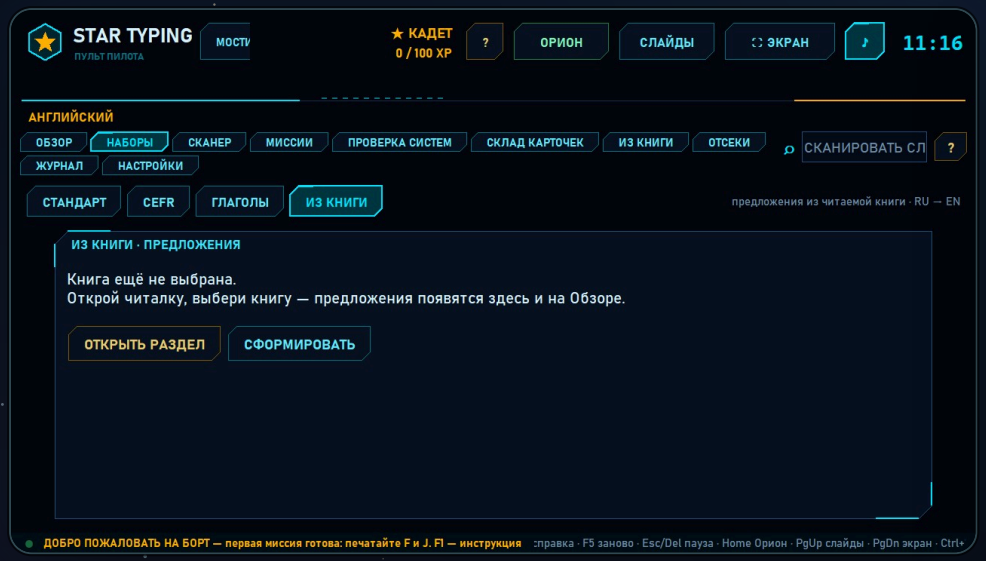

80 %
Threshold
80 % or more pronounced correctly — accepted.

→
Auto-advance
Straight to the next form or word.

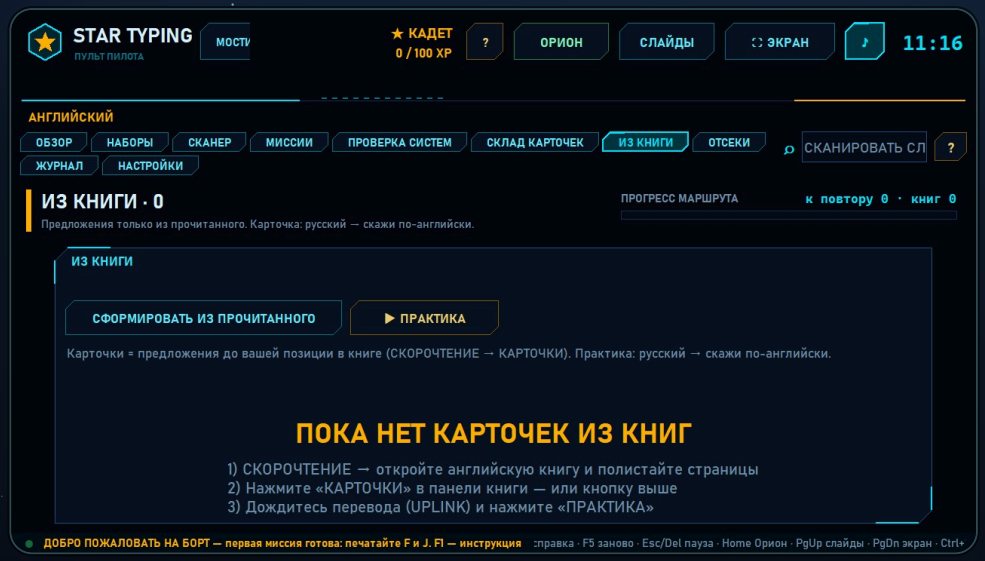

∞
Attempts
Unlimited — try until you get it.

Speech recognition is offline (Vosk); the model is downloaded separately.

Cards from a book and the fast book

“From book”: until a book is read, the tab explains how to get cards.

Book for cards: choose a book and start practice quickly.

01
Sentence cards

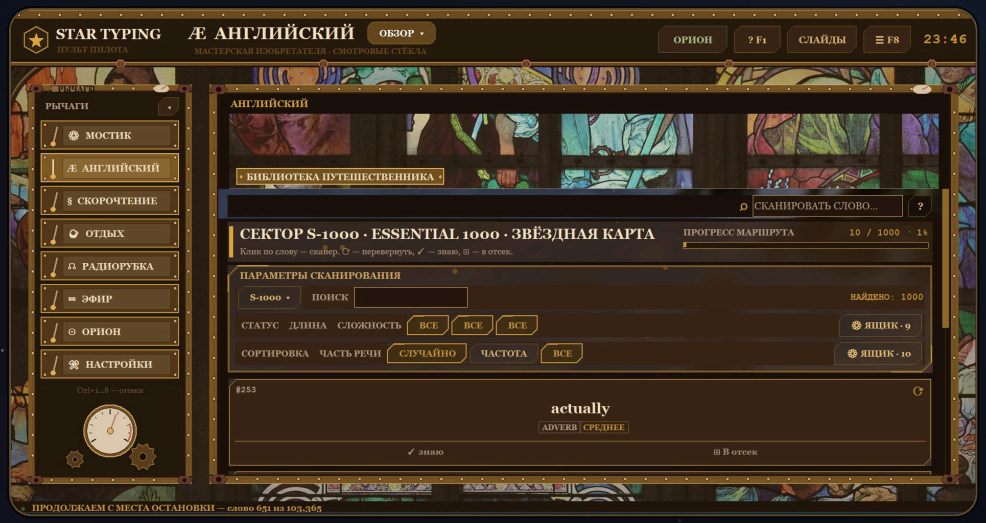

For advanced learners (speed + level B1): sentences from a book you read — Russian on the card, the answer in English.

02
Fast book

Text parsed in a single pass, a persistent cache and background sync — the book is ready sooner.

FOR STUDENTS

Card practice and reverse translation

The S-1000 set in the “Steampunk” skin: word cards with filters and sorting.

Available now

In the app today

- Word cards: IPA, syllables, translation, examples with translation, typical mistakes
- Reverse cards: first the translation or definition — recall the English word
- “From book”: a Russian sentence on the card — the answer in English
- Typing an English book with the sentence translation under the line

PLANNED

Next

- Reverse translation for other pairs: Russian → German and more
- English grammar rules — in addition to the cards
- Cards for typing practice

Student assignments — in one place

Teacher tools are still planned. The groundwork already exists: your own texts, PDFs, books with translation and cards.

Already now: any text, article or PDF can be loaded for typing, speed reading and translation.

PLANNED

For lessons — planned

- Homework: a text, a card set or a book from a given chapter
- Easy assignment to a group or to an individual student
- Word sets for your own course and grammar rules
- German on the same principle

PLANNED

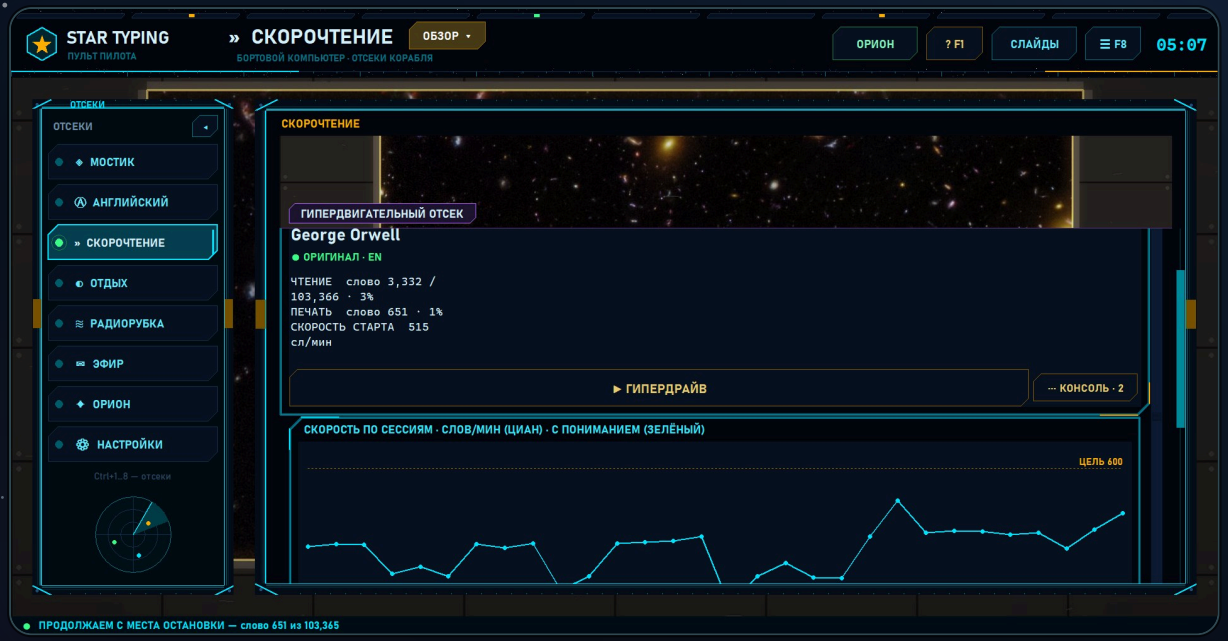

Platform growth — planned

- Developer-participant mode already works for the author; for external contributors — in the web version
- Suggest improvements via “Orion” right from the app; the authors review every one

SECTION 04

Speed reading and reader

Read faster — get more done.

Speed reading: current book, starting speed, quick start and a speed chart by session.

Reader (“Steampunk” skin): book text, translation, settings for speed, font and words per frame.

What it is

Two tools in one section. Speed reading trains your speed with a “translation under the word” option: English text into Russian, Russian or Ukrainian into English. The reader shows your own books page by page, translates words instantly and has a “2 languages” mode for books with a ready translation: original on the left, translation on the right. What you read becomes cards for the “English” section.

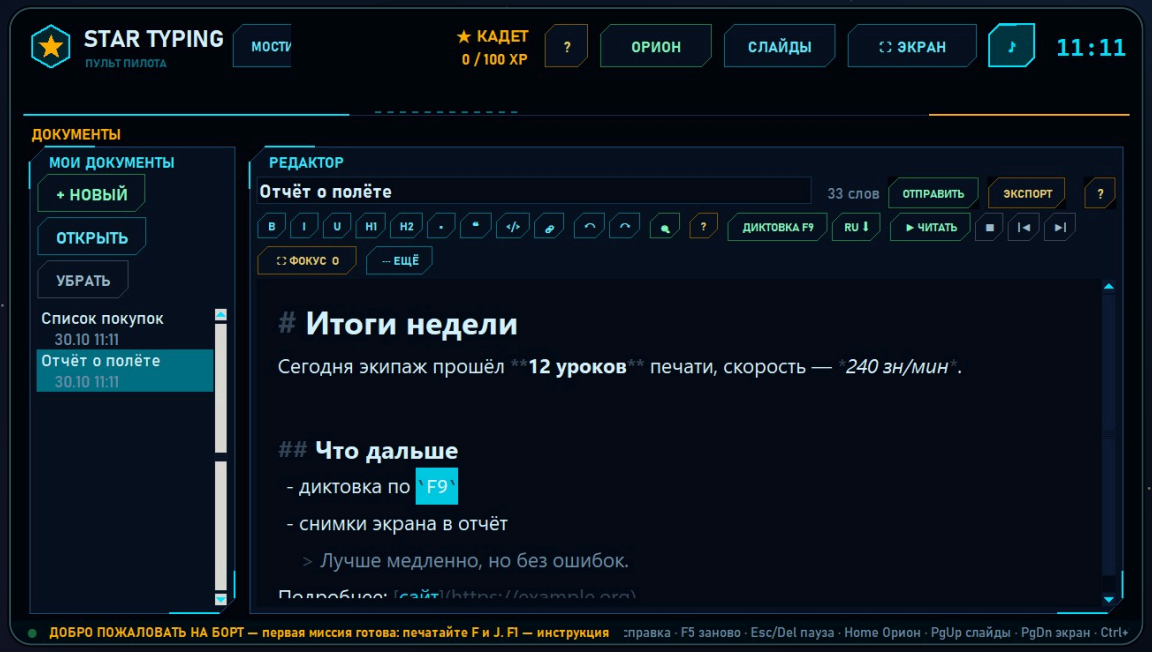

Why it helps

- Read faster — get more done
- Translation under the word — both ways
- Books in the original with the translation alongside, no separate dictionary
- What you read becomes cards

OUTLOOK · PLANNED

- Reading-comprehension exercises
- Reading position sync with the web version
- More book formats

Documentation: write, dictate, translate

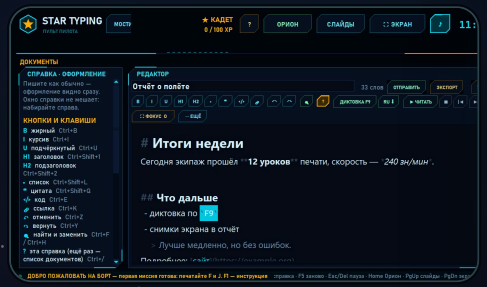

Main screen: document list, Markdown editor, command panel.

What it can do

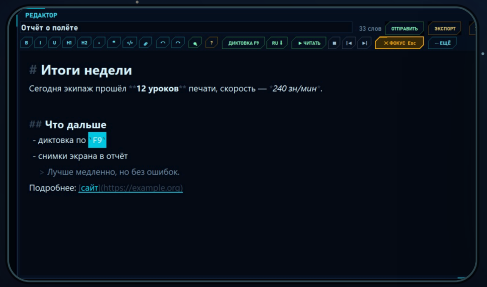

- **Typing and dictation** — keyboard or voice (F9), dictation in RU / UK / EN, offline
- **Markdown** while typing: headings, lists, quotes, code; “?” cheat sheet
- **Images** — from the clipboard (Ctrl+V), a screenshot or a file
- **▶ READ** — aloud, with the phrase highlighted
- **TRANSLATE** into English and German (EN/DE), keeping the formatting
- **CHECK** — “Orion” finds mistakes, you choose the fixes
- **PDF, DOCX, e-mail** with .docx; export to .md/.html/.txt
- **Load on board**: .txt, .md, .docx with images
- **Focus O** and a compact mode for 1024×600

From draft to PDF — in one window

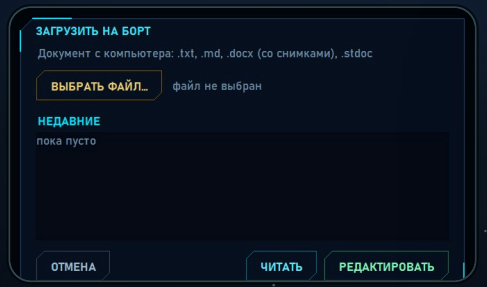

The document saves itself. Notes, reports and letters — in one bay, without external editors.

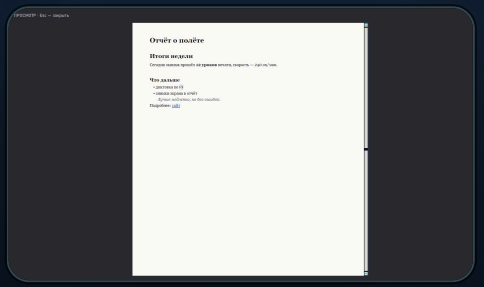

«?» — Markdown cheat sheet

Focus O — editor fills the window

OPEN — load a file

PREVIEW — the page before printing

01
Voice

Dictation in RU/UK/EN and read-aloud with the reader's voice.

02
Translation

EN or DE: the selection or the whole document — below the text or as a new document.

03
AI check

"Orion" proposes fixes as a list — you apply only the ones you need.

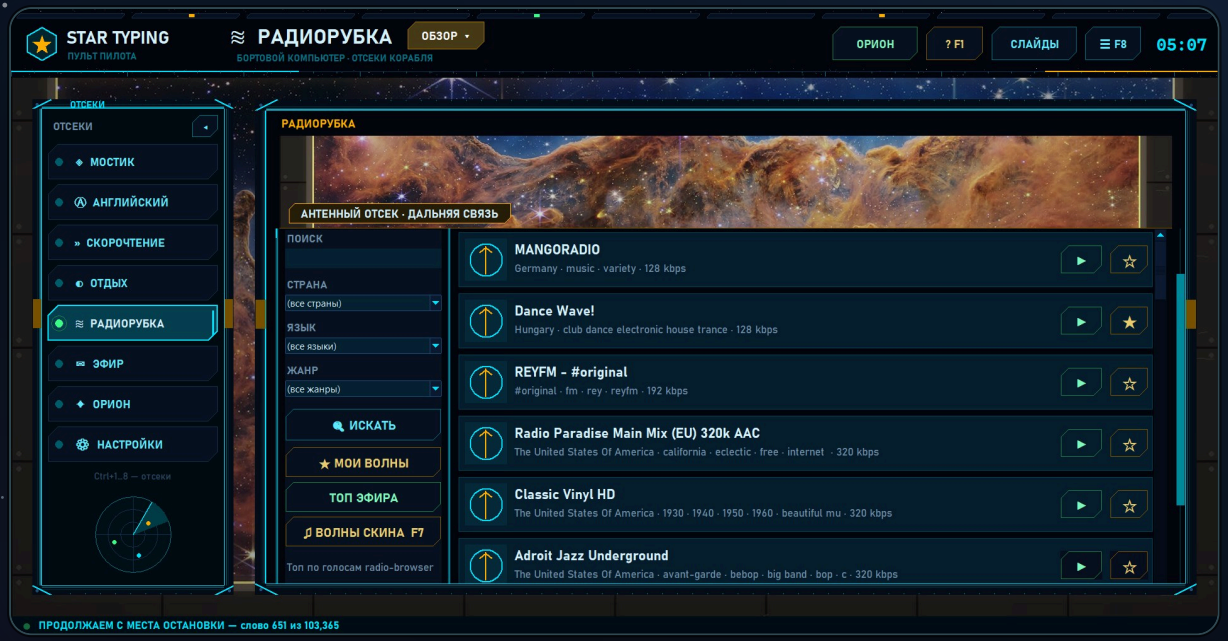

04
Export

PDF, DOCX, Markdown, HTML, TXT and an e-mail with a .docx attachment.

SECTION 05

Music and radio

A backdrop for focus.

Station catalogue: search by country, language and genre, favourites and popular stations.

Player (“Steampunk” skin): current station, genres, “Play” and “Stop” buttons.

What it is

A built-in internet-radio player with search and favourites. Music plays alongside your training — no need to switch to other programs.

Why it helps

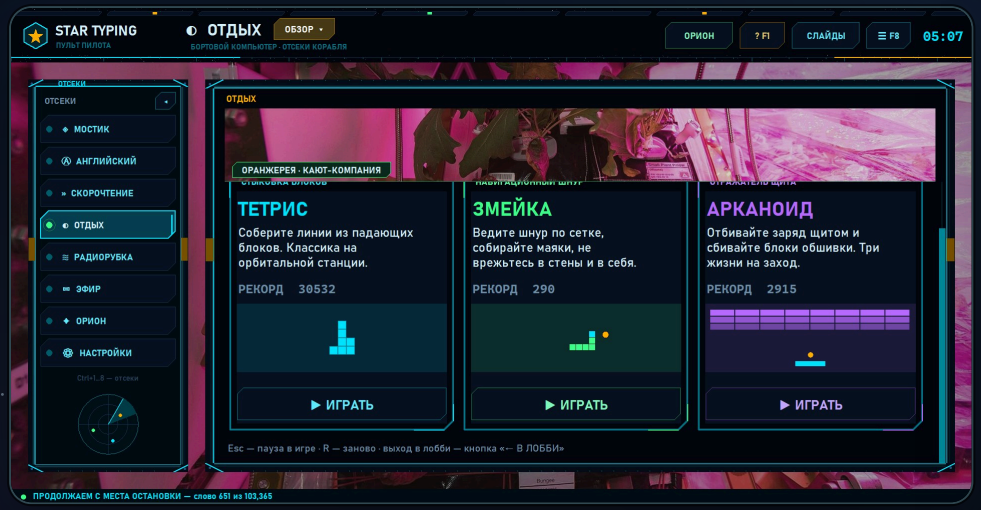

- Plays alongside your training
- Favourite stations always at hand
- English-language stations — extra immersion in the language

OUTLOOK · PLANNED

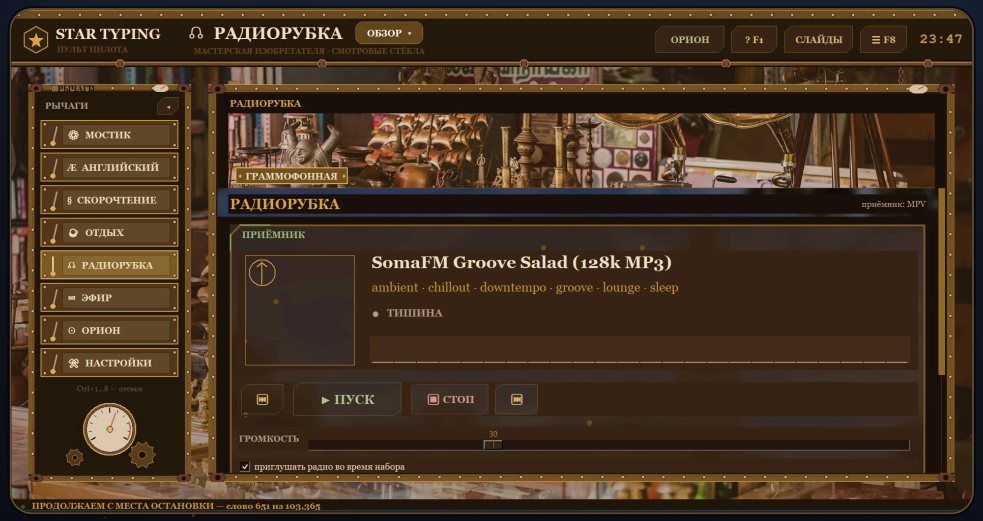

- A focus-session timer with music
- Automatic station choice for the type of session
- Station collections in the language you learn

ALL IN ONE

Training, music, breaks — in one window

Breaks and mini-games: “Tetris”, “Snake” and “Arkanoid” with high scores — a short reset between sessions.

Music and radio: the station keeps playing while you type, read or rest.

Now

- Music plays alongside your training
- Mini-games without leaving the app — and back to the lesson

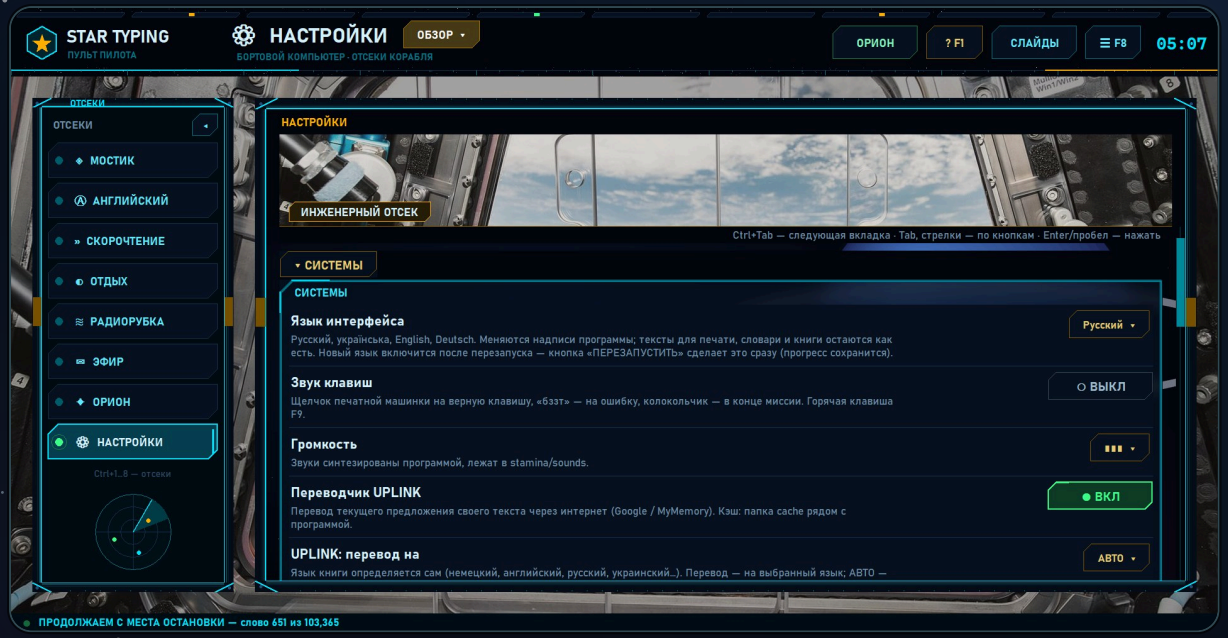

COMMUNICATION · PLANNED

- Chat between users
- Touch-typing tournaments and contests
- Mini-games where the controls are typing practice too

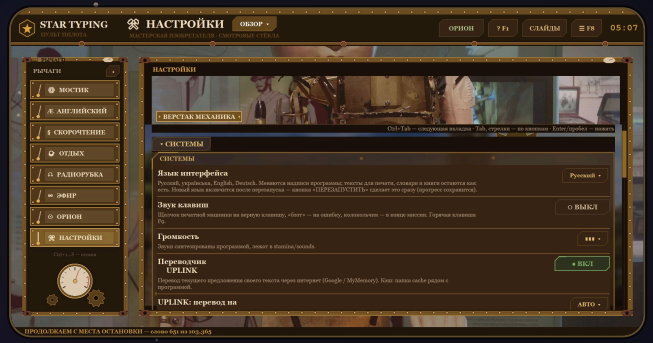

SECTION 06

Settings

An app that fits you.

Settings: interface language, key sounds, volume, translator.

The same settings in the “Steampunk” skin.

What it is

Interface language (Russian, Ukrainian, English, German), key sounds, volume, translation options, skin choice. Subsections switch with the Alt+1…4 hotkeys.

Why it helps

- Everything is configured in one place
- Four interface languages: Russian, Ukrainian, English, German
- The same settings view in every skin

OUTLOOK · PLANNED

- Settings profiles for different users
- Import and export of settings
- Accessibility settings: font size, contrast

Starship, steampunk and five more worlds — chosen at sign-in

“Starship” skin: cold neon, portholes and space — a sci-fi cockpit atmosphere.

“Steampunk” skin: brass, levers, a pressure gauge and the warm tones of an inventor’s workshop.

7 × 2

Seven skins, each with a classic and an alternative look.

Slideshow

Its own set of wallpaper slides for each skin.

Full screen

F11 — immersion without distracting windows.

Multi-monitor

All windows open on the monitor where the app is.

4 languages

Русский, українська, English, Deutsch.

SHIP'S CAPTAIN

Capabilities for those building their own version of the ship

The captain is a role for those who develop their own version of Star Typing. Below — what already works and what is still in progress.

01
All levels and verbs

The captain has all CEFR A1–C2 levels and all irregular verbs open at once — no waiting.

02
Developer-participant mode

The platform changes from within: tasks, plan and changes — together with "Orion", right from the app.

03
Geolocation

Right-click — the bay, element and coordinates of the point in the bottom line and the clipboard; Ctrl+V — into Orion's chat.

04
Crew: step by step

For the crew, levels open one by one: the next one opens when 80 % of the words of the previous level are done.

IN PROGRESS · NOT READY YET

Your own AI agents with a voice

- Connecting your own AI agents to the ship
- Each agent has its own voice
- The basis of the future AI agent showcase

Who this role is for

- For those developing their own version of the ship: a fork, their own sets and texts
- For the author and contributors who need full access
- The crew learns step by step, the captain sees everything at once

ROADMAP

What comes next

Everything except the first column is **plans and ideas**, not finished features. Order and timing may change.

Now

Desktop

"Orion" with the from-within development prototype, typing your own texts, PDFs and books with translation, English, speed reading and reader, music, mini-games.

PLANNED

Web version

A TypeScript web version that will catch up with the desktop in features.

PLANNED

Communication

Chat between users and touch-typing tournaments.

PLANNED

Grammar and new languages

English grammar rules. Then a high-quality service for German on the same principle.

IDEA

"Orion" the mentor

Mistake analysis, exercise selection and explanations of words from books.

TS The TypeScript web version (planned) will let you study right in the browser. First — parity with the desktop, then shared improvements for both versions.

ALL PROSPECTS · PLANNED

Where the platform is heading

Everything on this page is **plans and ideas**, not finished features. Order and timing may change.

TypeScript web version

- Study in the browser
- First — parity with the desktop
- Reading position sync

AI agent “Orion”

- Your own AI agent: your key or server and model
- A voice for every connected agent
- AI agent showcase: OpenAI, Grok and other services
- A service agent for those who support the project
- Developer-participant mode — for external contributors
- Mistake analysis and exercise selection

Languages

- English grammar rules
- German — a high-quality service on the same principle
- Other languages after German

Touch typing

- Word and phrase cards for typing practice
- New lesson sets
- Weekly statistics

Students and teachers

- Reverse translation: Russian → German and other pairs
- Homework and assignments
- Sets for your own course

Communication

- Chat between users
- Touch-typing tournaments and contests

Reading and music

- Reading-comprehension exercises
- More book formats
- A focus-session timer with music

Platform and technology

- AI agent connector: your own agents, each with its own voice
- TypeScript web version
- Tauri — a lightweight desktop shell
- Porting heavy features to the web version

HOW TO TAKE PART

Build your own version of the ship

Star Typing evolves from within — and you can join in.

01
Fork on GitHub

Fork the Star Typing repository — and develop your own version of the platform.

02
Geolocation + “Orion”

Right-click a place in the interface, Ctrl+V into the chat — and describe the change. The on-board AI will know what you mean.

03
Your own AI agents

Connecting your own agents with their own voice — **in progress**.

04
Your own sets and texts

Load your own texts, PDFs and books; build word sets for your own course.

Every change is a proposal reviewed by the authors. Developer-participant mode already works as a prototype for the author; opening it to external contributors is **planned** (web version).

SUPPORT THE PROJECT

Why the project is worth supporting

Star Typing is an independent project that the author already develops from within together with the AI agent on board. Everything you have seen in this brochure already works in the desktop version — and ahead are the web version, German, grammar and tools for teachers.

What is already done

- Typing your own texts, PDFs and books with translation
- 20,000 words and 579 “IT Interview” cards
- Speed reading, reader, music, mini-games
- AI agent “Orion”: a from-within development prototype with the AI agent on board
- 7 skins × 2 looks, 4 interface languages

What support will fund

- TypeScript web version
- Grammar rules and a German service
- Tools for students and teachers
- Communication and touch-typing tournaments

IN THE WEB VERSION · PLANNED

What supporters get

- Service AI agent “Orion” — no key of your own needed
- Taking part in development via developer-participant mode — opening it to external contributors

Support is entirely optional. If the app is useful to you, it helps release the next steps sooner.

Ways to support — coming soon

START TODAY

Level up the skills that IT needs

Start with the first touch-typing lesson, open the English word cards, turn on your favourite station — and let “Orion” help along the way.

START

CHOOSE A SKIN

Join the development

Star Typing already evolves from within — the author works together with the AI agent on board. The next step is to open this to contributors: improve the platform from the app, and the authors will review every proposal. For external contributors — in the web version, planned.

Star Typing · desktop app · interface: Russian · Ukrainian · English · German · web version — planned

Project author — **Sergey Chernysh**
